

7.1.2.4 The Institution has facilities for Green campus initiatives

There are many green campus initiatives that can be implemented at SDGI to promote sustainability and reduce the environmental impact of the college. Here are some possible examples:

Renewable energy: SDGI could invest in renewable energy sources such as solar panels to power the campus. This would reduce the college reliance on fossil fuels and decrease its carbon footprint.

Waste reduction: The College could implement a waste reduction program that encourages students and staff to reduce, reuse, and recycle. This could include composting, reducing paper usage, and implementing a campus-wide recycling program.

Sustainable transportation: SDGI could promote sustainable transportation options such as cycling, walking, or public transportation. The college could also provide incentives for carpooling and electric vehicle usage.

Green buildings: The College could implement green building standards for new construction and retrofitting of existing buildings. This could include using sustainable building materials, increasing energy efficiency, and promoting indoor air quality.

Water conservation: SDGI could implement water conservation measures such as installing low-flow faucets and toilets, and promoting the use of rainwater harvesting systems.

Sustainable food: The College could promote sustainable food options in its cafeteria and food outlets, such as locally sourced and organic food, and reducing food waste.

By implementing these and other green campus initiatives, SDGI could promote sustainability and reduce its environmental impact, while also setting an example for other institutions to follow.
